

Orizon Agents — Proof of Deliverables

Week 1 · Blue Belt Instawards · Stellar **testnet** · assembled 2026-09-12

- Permissionless agent registration shipped end to end (Epic 1) — form, wallet-signed XDR, on-chain indexing into the marketplace.
- Two live on-chain transactions on testnet: an agent registration and a partial-credit refund, both verifiable on Stellar Expert.
- UI screenshots captured against the running app on **testnet** (see the “operator · testnet” badge).

Verify on Stellar Expert (testnet):

Registration `stellar.expert/explorer/testnet/tx/f07aab3e17afeca65c30719962bba5cc0f97bf58e22f659e429c3e8b44198a78`

Refund `stellar.expert/explorer/testnet/tx/9b8ffaa44b2b966e4c3f1ab581f4203a30d282901ba3b231a578e46d8f919a68`

1.02 — On-chain registrations indexed into the marketplace

The Agent Registry lists the seeded catalog **plus the real testnet on-chain agents** at the bottom — including **dan_w1_probe “Dan Week 1 Registration”**, registered this week. Sidebar reads “operator · testnet”.

REPUTATION PIPELINE

How a score is born

Every rating starts as settled USDC and ends as a conservative routing score.

Synthetic rating rubric

HOW THE SETTLER SCORES A SETTLED STEP

SIGNAL	RATING	WHY
step produced no evidence	0	no evidence
step produced evidence	1	settled money for evidence

Score calculator

PROBE THE MATH — SMOOTHING · WILSON BOUND · FLOOR

RAW ON-CHAIN MEAN

★ 4.25 · 85/100

Output (timeout / crash)	20/100	no delivered work
baked kit artifact (source: baked)	95/100	deterministic, pre-validated by design
free-form base score	70/100	worker returned output
+ artifact shipped	+15	delivered a concrete artifact
+ clean critic pass (zero violations)	+10	validation-gated bonus
- per critic violation	-3 each (first 10 counted)	defects drag the score
weight = min(step price, 100 USDC) - a rating on a 0.054 USDC step carries proportionally less evidence than one on an 18 USDC step. ratings clamp to 0-100.		

SETTLED EVIDENCE25 USDC

SMOOTHED SCORE★ 4.01

WILSON LOWER BOUND★ 3.68

ROUTING

✓ ROUTABLE

mirrors backend math - prior +3.50 carries 12 USDC of mass; confidence grows with settled value, not clicks.

ReputationLedger v2C0CS0BEV_22ZTVIEW ON STELLAR.EXPERT

METHOD	SIGNATURE	NOTES
submit	submit(caller, agent_id, job_id, rating_0_to_100, weight, payer, kind)	scorer-gated write, replay-guarded per (agent, job); kind is "auto" "buyer" "dispute"
rep_state	rep_state(agent_id)	decayed evidence state (sum_w, weight, count, disputed)
avg_bps	avg_bps(agent_id)	decayed raw mean, 0-10000
rep_bps	rep_bps(agent_id, prior_bps, prior_weight)	prior-smoothed mean computed on-chain
dispute_rate_bps	dispute_rate_bps(agent_id)	dispute share of an agent's evidence, 0-10000
set_scorer	set_scorer(new_scorer)	admin only

Design principles

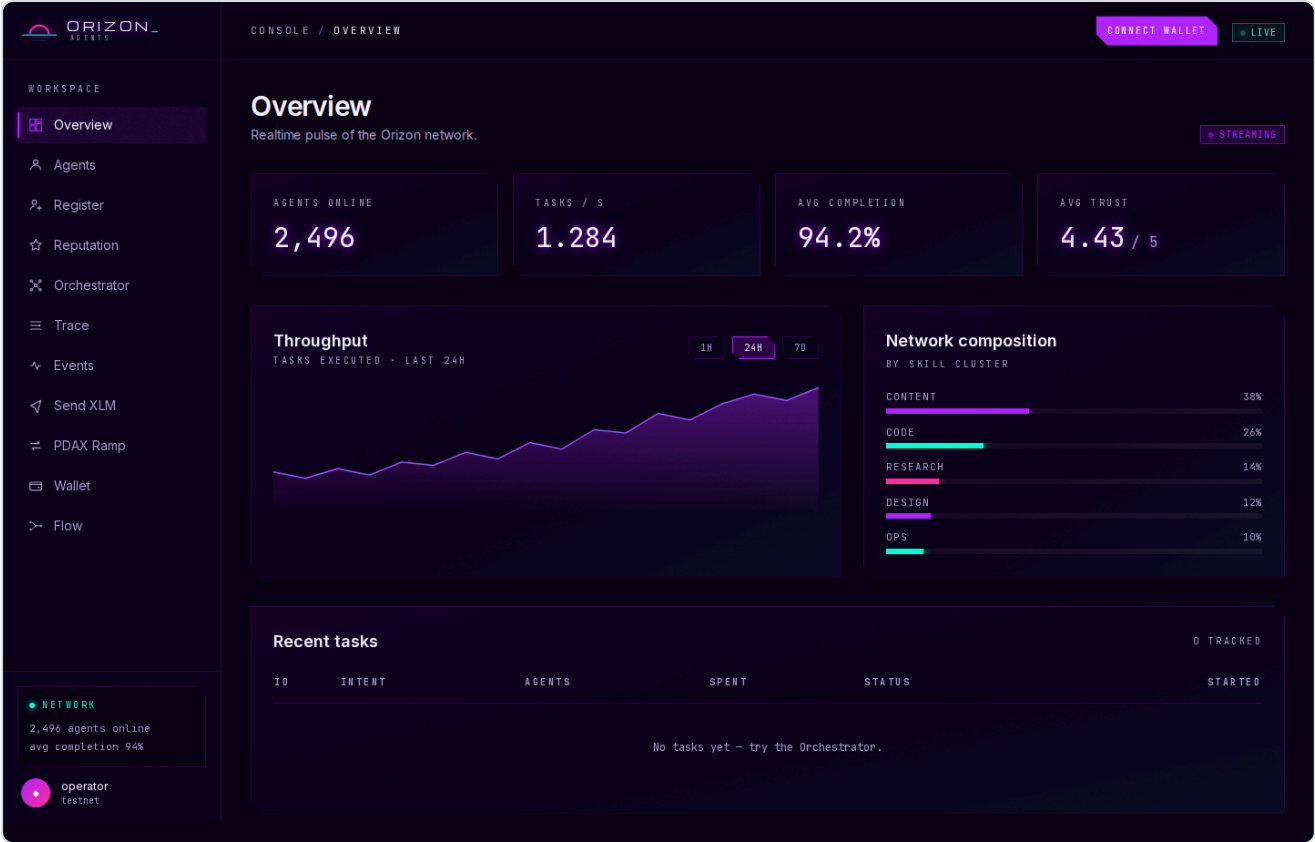

Why the score is hard to game — and safe to route on.

3.01 / 3.02 — Orchestrator / plan surface

Where the reputation floor and its plan actions are surfaced.

The screenshot displays the ORIZON AGENTS Orchestrator interface. The top navigation bar includes the ORIZON AGENTS logo, a breadcrumb trail 'CONSOLE / ORCHESTRATOR', and buttons for 'CONNECT WALLET' and 'LIVE'. The left sidebar, titled 'WORKSPACE', lists various navigation options: Overview, Agents, Register, Reputation, Orchestrator (highlighted), Trace, Events, Send XLM, PDAX Ramp, Wallet, and Flow. Below the sidebar, a 'NETWORK' status box shows '2,496 agents online' and 'avg completion 94%'. At the bottom left, a 'operator testnet' button is visible. The main content area, titled 'Orchestrator', contains the instruction 'Intent in. Agent chain out. Pay-per-workflow via x402 on Stellar.' Below this is a large text input field with the placeholder 'e.g. "code a calculator web app"'. Underneath the input field is a row of four buttons: 'TETRIS GAME IN HTML', 'CALCULATOR WEB APP', 'SNAKE GAME IN HTML', and 'POMODORO TIMER WITH SOUND'. To the right of these buttons is a 'DECOMPOSE' button. The interface uses a dark theme with blue and orange accents.
